

Driving Success with Data: A Consonus + Transforming Age PDPM Case Study

Panel Discussion

1. Anthony Laflen - Director of Data Analytics
2. Jonalyn Brown - Vice President of Operations
3. Ryan Miller - NHA, Assistant Executive Director, Skyline - Transforming Age
4. Jonathan Free - Regional Clinical Nurse - Transforming Age

DESCRIPTION

With the most significant change in skilled nursing reimbursement in the last 20 years approaching, it will be important for providers to understand the driving forces and how to position themselves for success.

There are distinguishing themes demonstrated in high performing health care organizations who have already been exposed to the various alternative payment models; particularly in the area of rehabilitation and preparing these patients for discharge to a lower level of care. These themes are the foundation for high quality and efficient results.

Learn from leaders of a chain of facilities with experience in a heavily managed care environment about how they have implemented these strategies throughout their organization and the results they are experiencing compared to a more traditional Medicare payment model, in a panel discussion. Follow along as they share specific case study examples of patients in both traditional and alternative payment models, best practices in laying the groundwork, testing and leveraging data in preparation for PDPM. This presentation will review critical tools needed for this more efficient model and allow the audience to participate in the discovery process with tangible examples of how to achieve similar results in your market.

LEARNING OBJECTIVES

1. Distinguish the shift in Post-Acute Reimbursement to PDPM
2. Describe qualities of those high performing, successful providers who will be winners in this environment
3. Outline case study for what a successful transition to this new payment model looks like
4. Specify the tools you will need to be navigate this new environment, including data analytics
5. Identify how to use the tools to demonstrate evidence of success
